

# MT3750C Series

## Metal Tube Variable Area Flowmeters for Low Flow Rates in Harsh Environments

When you need durable, reliable, low flow fluid measurement in high-pressure, high-temperature or hazardous settings, MT3750C Series metal tube variable area flowmeters are the solution. Constructed from high-strength steel, MT3750C Series flowmeters feature a compact design with multiple threaded and flanged connection options making them easy to install and integrate into existing plants, as well as a cost-effective replacement for glass tube flowmeters. Certified explosion proof, MT3750C Series flowmeters are ideal for a variety of low flow gas and liquid applications. Optional needle valves, transmitters and inductive alarms are available for more advanced flow measurement and control.

### Features

Wetted Parts Made from Stainless Steel or Monel®

Ranges Up to 100 l/h or 26 GPH

High Pressure and Temperature Ratings

Compact Size

Local Reading, Integral Control Valve

Certified Explosion Proof, Intrinsically Safe

### Benefits

Compatible for a wide range of fluids (liquids or gases)

Capable of measuring (very) low flows accurately

Designed to work safely in harsh environments

Enables easier installation into tight spaces

Optional needle valve, transmitter or alarms provide added levels of measurement and control

ATEX, CSA, and IECEx Approved

# Product Specifications

## Specifications

Measuring Range	See Capacities Table 2
Rangeability	10:1 (most sizes)
Metering Tube	316L (stainless steel) Monel K-500
End Fittings	316L (stainless steel) Monel K-500
Accuracy	5%, 3%, VDI/VDE class 4, 2.5
Repeatability	1% Full Scale
Scale	Silver increments with black background - Aluminum Material (52 mm long), single or dual
Connections	1/4" to 3/4" NPT Female 1/4", 6 mm tube compression
Floats	316L stainless steel Titanium Gr. II
O-Rings	Viton® fluoroelastomers PTFE Teflon®, Buna-N, Kalrez® 4079 perfluoroelastomers, Ethylene Propylene
Protection Category	(Indicator only) IP66/67/NEMA 4X, (Alarms) IP65/NEMA 4X, (Transmitter) IP66/67/NEMA 4X
Indicator Housing & Cover	Die cast Aluminum (Alloy 380), epoxy paint, glass window
Maximum Fluid Temperature	204°C/400°F (Refer to tables on Page 3)
Maximum Fluid Pressure	1500 PSIG (100 Bar) 4000 PSIG (276 Bar) (No valve, 1/4" NPT only)
Meter Dimensions	Refer to Figures on Pages 4, 5 and 6
Model Code	Refer to Pages 10, 11 & 12
Pressure Equipment Directive (PED) 2014/68/EU	Flowmeter complies under Sound Engineering Practices (SEP)
RoHS	Products conform to the European Restriction of Hazardous Substances (RoHS) Directive 2011/65/EU
Inductive Alarm Switches	1 or 2 inductive switches
Reed Switches	1 or 2 switches
Transmitter	4-20 mA output
Agency Approvals	Refer to Tables 6-9
Optional Equipment	Cartridge or NRSTM valves Integrally mounted flow controllers

6	2.8 - 26	11 - 100	---	12 - 110	0.31 - 3.1	130	44	17.7

### Notes:

1. Air flows in scfh converted to 70°F and 14.7 psia when the meter is operated at 70°F and 14.7 psia.
2. Air flows in m³n/h (converted to normal conditions: 0° and 1.013 bar abs) when the meter is operated at 1.013 bar abs and 20°C.
3. When the viscosity of the fluid exceeds the viscosity immunity ceiling (VIC), a calculated correction is applied to account for the difference between factory calibration fluid and process fluid.
4. Capacities shown are based on 316L Stainless Steel float material for meter sizes 1 through 6. Size 0 capacity shown is based on Titanium float material. Titanium float material available for all sizes. Consult factory for flow ranges.

Explosion Safety "Constructional Safety (c)"	ATEX 	✓				II2G Ex h IIC T6...T3 Gb II2D Ex h IIC T200°C Db <b>Special conditions for safe use:</b> Enclosure contains glass & painted aluminum parts. If it is mounted in an area where the use of category 2G or 2D apparatus is required, it must be installed such that ignition source due to propagating brush discharge sparks are excluded.  The actual maximum surface temperature of the equipment depends not on the equipment itself, but on operating conditions of the process fluid/gas flowing through the equipment. The equipment by itself does not generate heat. Due to this reason the temperature class is marked as a range. The maximum permitted ambient and process temperature limits can be found in the operating instructions.  At start up especially for gas applications, ensure that the pressure is gradually increased through the piping system. A sudden pressure spike situation may result in a fast movement of the float within the VA flowmeter & the float may hit hard against the float stop.  Supply grounding connection by the process connections or earthing terminal.	MBID 022

## Description - Transmitter

The transmitter provides accurate magnet angle detection and conversion to a 4 - 20 mA industry standard output signal, based on the position of a float assembly in the flowmeter. This rugged, compact, microprocessor-driven device is capable of providing accurate flow information to your external support systems. The patented magnetic sensor with automatic gain control enables an extremely high dynamic capture range without sacrificing accuracy. (Reference Transmitter Wiring Diagram on page 9)

## Description - Reed Switch Alarm

Two reed switches are installed in the alarm housing to provide signaling or switching functions when a preset flow value has been reached. The reed switches provide high, low or dual setpoints and latched output over the full range. The switches are normally adjusted to the desired flow range in the factory. Modifications to the switch settings can be made in the field. Minimum setting distance between two switches is approximately 40% of the scale. (Reference Reed Switch Wiring Diagram on page 9)

## Data Reed Switch

Maximum Voltage\* 175 Vdc, 124 Vac  
Maximum Current\* 250 mA  
Maximum Contact Rating\* 3 Watts  
(\*Maximum Switch Specifications)

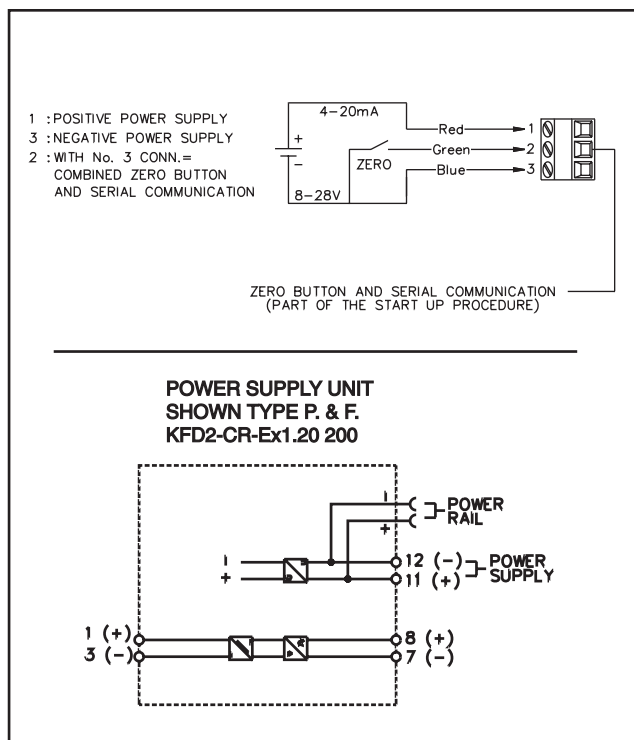

## Electrical Classification

Non Incendive:  
Maximum Voltage 30 Vdc  
Maximum Current 100 mA  
Maximum Contact Rating 3 Watts

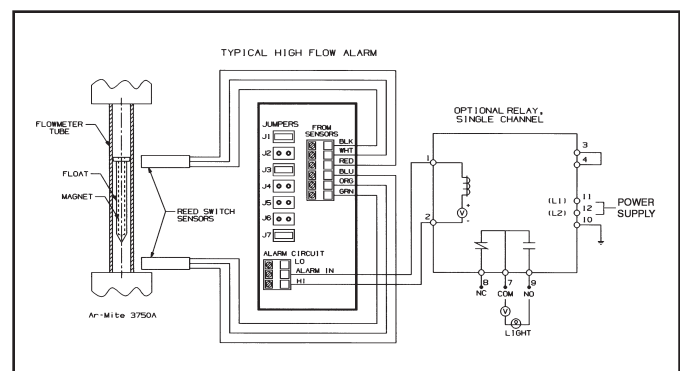

Table 8 Product Approvals - MT3750C With Reed Switch Alarm

Approvals	Mark	Meter Options				Standards/Directives/Marking	Declaration/Certificate
		Mechanical	Transmitter	Inductive Switch Alarm	Reed Switch Alarm		
Explosion safety "Intrinsic Safety (ia)"					✓	Class I, Div 1, Groups A, B, C and D; Class II, Groups E, F and G; Class III; Encl Type 4X IS Entity Parameters: Vmax=30Vdc, Imax=100mA, Ci=0, Li=0	1788748
Explosion safety "Non-incendive"					✓	Class I, Div 2, Groups A, B, C and D; Class II, Groups E, F and G; Class III; Encl Type 4X	1788748
Explosion safety "Intrinsic Safety (ia)"					✓	Reed Switch Alarms are classified as "Simple Apparatus" when used in Intrinsically Safe circuits. They comply with the requirements of EN60079-11 clause 5.7 – Simple apparatus.  Ambient Temperature ratings: $-20^{\circ}\text{C} \leq T_{amb} \leq 65^{\circ}\text{C}$ Input parameters: Vmax = 30V, Imax = 100mA, Ci = 0μF, Li = 0μH  Special conditions for safe use: • The product should be installed by suitably trained personnel, in accordance with the applicable code of practice. • As the product has no source of internal heating, the temperature classification is dependent on the ambient air temperature. • Since part of flowmeter enclosure is made of painted aluminum, if it is mounted in group II, category 1 area, it must be installed such, that, ignition sources due to propagating brush discharge sparks are excluded

## Limit Switches - Inductive Alarm Switch

One or two electronic limit switches type SJ2-N can be installed in the indicator housing to allow initiation of signaling or switching functions on a preset flow value being reached. The SJ2-N limit switch operates as a slot initiator that is inductively actuated by a cam mounted to the pointer. Any flow value can be used for setting the limit value by sliding the switch along the slot in the mounting plate for the initiators. Minimum setting distance between two limit switches is approximately 50% of the scale range.

<b>Power supply</b>	<b>8 Vdc (Max. 15.5 Vdc)</b>
Current consumption	active area clear: > 3 mA
Current consumption	active area obscured: < 1 mA
Self inductance	29 $\mu$ H
Self capacitance	20 nF
Max Temp	158°F (70°C)

The flow valve can be used for setting the limit value by sliding the switch along the slot in the mounting plate for the initiators. Minimum setting distance between two limit switches is approximately 50% of the scale range.

Brooks is committed to assuring all of our customers receive the ideal flow solution for their application, along with outstanding service and support to back it up. We operate first class repair facilities located around the world to provide rapid response and support. Each location utilizes primary standard calibration equipment to ensure accuracy and reliability for repairs and recalibration and is certified by our local Weights and Measures Authorities and traceable to the relevant International Standards.

Visit [www.BrooksInstrument.com](http://www.BrooksInstrument.com) to locate the service location nearest to you.

## START-UP SERVICE AND IN-SITU CALIBRATION

Brooks Instrument can provide start-up service prior to operation when required. For some process applications, where ISO-9001 Quality Certification is important, it is mandatory to verify and/or (re)calibrate the products periodically. In many cases this service can be provided under in-situ conditions, and the results will be traceable to the relevant international quality standards.

## SEMINARS AND TRAINING

Brooks Instrument can provide seminars and dedicated training to engineers, end users, and maintenance persons.

*Please contact your nearest sales representative for more details.*

Due to Brooks Instrument's commitment to continuous improvement of our products, all specifications are subject to change without notice.
